

Thread locker

Hoses

ITEM DESCRIPTION

In some situations it can be dangerous when a bolt-screw connection comes loose. This is because a leak may occur in your compressed air system or an unsafe situation may arise in another way.

Screw thread locking agent fills all the cavities between the bolt and the nut and forms a hard plastic. The waist has a sealing effect, ensures permanent bore and is vibration resistant.

Function

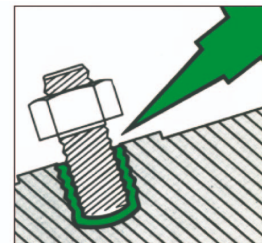

Anaerobic adhesives undergo curing together with metals. They find applications in securing, mounting and sealing threaded connections, surface joints and joint connections.

The advantages of thread locking agents are:

- Increase the reliability of a connection
- Prevent vibrations

Note:

We recommend treating passive surfaces, such as stainless steel, chrome, nickel, zinc or plastic, beforehand with AKTIVATOR to ensure optimum adhesion.)

Art. code	Capacity	Max thread size	Breaking strength	Crack filling
SD270050	50 ml	M20	26-56 Nm	0.05-0.15 mm
