

Threaded seal

Hoses

ITEM DESCRIPTION

Thread sealant is used to prevent leaks in your compressed air system. A leak can have major consequences; loss of air pressure, downtime of a machine or installation etc.

Leakage of the thread seal can have various causes:

- No full contact with the flanks of the thread
- Poor quality of the threads
- Chade on the thread
- Tighten too tightly or too loosely.

Note:

We recommend treating passive surfaces, such as stainless steel, chrome, nickel, zinc or plastic, beforehand with AKTIVATOR to ensure optimum adhesion.

Tube seal, moderately stiff for hydraulic and pneumatic fittings, approved for gas (DVGW)

Art. code	Capacity	Max thread size	Breaking strength	Crack filling
SD542050	50 ml	3/4"	16-36 Nm	0.05-0.12 mm
SD572050	50 ml	3"	12-28 Nm	0.1-0.25 mm
SD577050	50 ml	4"	9-25 Nm	0.00-0.8 mm
SD5770250	250 ml	4"	9-25 Nm	0.00-0.8 mm
