

VP-UV-serie

Used to evacuate chambers, degas liquids and in other processes requiring vacuum levels of 1/4"Hg absolute (8Torr). Also used as the first stage pump in applications requiring high vacuum to reduce operating time of expensive high vacuum pumping systems. Increase pumping speed above 25"Hg vacuum level.

Application:

As a first step to reduce the operating time of expensive high-vacuum pumps. Laboratory vacuum calibration of measuring devices.

SPECIFICATIES • CHARASTERICS

Supple pressure <i>perslucht</i>	bar
Vacuum degree <i>vacuum</i>	bar
Air flow <i>druk</i>	NL/min
Air flow consumption <i>vebruik</i>	NL/min
