

# Silencer

**made of sintered bronze**

## Silencer M5 to G 1"

*When compressed air escapes into the atmosphere, it produces noise. This can be prevented by installing a "silencer".*

These dampers are made from a porous metal housing (sintered) bronze. The air flows through the material and is distributed, reducing the noise level.

*Silencer made of sintered bronze with sintered thread and groove*

### Material:

Sintered bronze

| ARTICLE NUMBER | Thread (A) | B  | C   | D    | E    | F  |
